How much does cobalt cost in 2022?

For example, the price of cobalt has fallen from roughly \$70,000 per metric ton in 2022 to about \$30,000 in 2024. Similarly, the price for lithium carbonate has fallen from a high of approximately \$70,000 per metric ton to well below \$15,000 in 2024.

Can lithiated nickel manganese cobalt oxide be produced by co-precipitation?

A process model has been developed and used to study the production process of a common lithium-ion cathode material, lithiated nickel manganese cobalt oxide, using the co-precipitation method. The process was simulated for a plant producing 6500 kg day<sup>-1</sup>.

How will cathode technology change the price of cobalt metal?

As the cathode material technology matures, manufacturers will require less frequent design changes leading to longer plant life and lower depreciation costs. The price of cobalt metal has changed in the last six years from a peak of \$27 per kg to a low of \$22 per kg.

How is lithium nickel manganese cobalt oxide powder produced?

Schematic of a process for the production of lithium nickel manganese cobalt oxide powder. The product stream, a slurry of solid precipitates in a solution, is phase separated, and then filtered and washed several times. The filtration may be done in a rotary vacuum filter followed by drying in a spray dryer.

Are lithium and cobalt prices market-reflective?

This includes benchmark prices for lithium and cobalt, two battery materials that continue to experience market volatility and supply/demand imbalances. Our widely used prices are market-reflective, assessing both the buy- and sell-side of transactions.

Why did cobalt buy 6,000 tonnes of cobalt?

Cobalt Holdings plans to acquire 6,000 tonnes of cobalt. Following their \$230M London Stock Exchange listing, this move secures a key cobalt reserve. With the DRC's export ban affecting prices, the decision reflects shifting industry dynamics.
