How much electricity does Iraq use per capita?

Electricity consumption per capita was 1 190 kWh in 2022. It remains much lower than in neighbouring countries (1 900 kWh in Jordan and 3 300 kWh in Turkey). In 2013, Iraq published its Integrated National Energy Strategy (INES) until 2030, which could represent US\$620 bn in investments in the energy sector.

What is the main energy source in Iraq?

Oil is the country's main energy source, accounting for two thirds of total energy consumption. By 2027, the country plans to double its oil production to 8 mb/d and expand its export capacity by 50%. Saudi Arabia and Iraq will build a 1 GW transmission line by 2023-2024. Iraq's economy is mainly based on the oil industry.

What is Iraq's Integrated National Energy Strategy?

In 2013, Iraq published its Integrated National Energy Strategy (INES) until 2030, which could represent US\$620 bn in investments in the energy sector. Beside infrastructure development, the strategy noted the need for institutional reforms to foster private participation in the energy sector.

How do you convert kWh costs to kW costs?

The \$/kWh costs we report can be converted to \$/kW costs simply by multiplying by the assumed 4-hour duration (e.g., a \$300/kWh, 4-hour battery would have a power capacity cost of \$1200/kW). To develop cost projections, storage costs were normalized to their 2024 value such that each projection started with a value of 1 in 2024.
