What is the energy storage permitting guidebook?

The Energy Storage Permitting Guidebook focuses on permitting of behind-the-meter (BTM) systems that are customer-sited, meaning they are located at homes, businesses, nonprofits, schools, and other properties to provide energy on-site (and, typically, to the grid as well).

What is a California energy storage permit guidebook?

CSE is leading development of an Energy Storage Permitting Guidebook to help California local governments and agencies adopt standardized, streamlined procedures to expedite installations. Commercial and residential energy storage systems can offer relief to grids and provide end users with lower energy costs and backup power during outages.

Should solar and battery storage be required for commercial buildings?

However, installing these on-site, behind-the-meter energy resources is hampered by a lack of uniform local permitting and approval processes. Goals for the guidebook include supporting recently adopted state energy codes that require both solar and battery storage for new commercial buildings.

Should commercial and residential energy storage systems be installed on-site?

Commercial and residential energy storage systems can offer relief to grids and provide end users with lower energy costs and backup power during outages. However, installing these on-site, behind-the-meter energy resources is hampered by a lack of uniform local permitting and approval processes.

What are non-electrochemical energy storage deployments?

Summary of non-electrochemical energy storage deployments. Pumped hydro storage plants store and generate energy by moving water between two reservoirs at different elevations. Water is pumped into an upper reservoir for charging and then released through pipes into turbines for discharging.

What if a developer wants to install energy storage?

If a developer wants to install an energy storage project in a jurisdiction that has not defined where storage is allowed, the developer is responsible for identifying a potential site and petitioning the jurisdiction to issue a conditional use permit or rezone the site to enable the project.
