

# Containerized BESS supplier quotation in Greece 2030

How much battery storage will Europe have by 2030?

However, based on current policies, the country looks set to hit only 4.8GW of operational battery storage capacity by 2030, as shown in the above infographic from LCP Delta's STOREtrack market intelligence platform covering energy storage across Europe.

What is a Bess augmentation strategy?

The BESS augmentation strategy can thus play a significant role, especially when the BESS is examined in a competitive environment such as the electricity markets. As soon as a BESS system is completed, it will participate in the DAM and IDM Markets run by HEnEx and BEM Market run by IPTO.

What is the long-term business case for storage in Greece?

The long term business case for storage will be supported by increasing interconnection, opening ancillary services and Greece's accession to the market coupling platforms, but until then, public funding is required to kickstart investment. Funding was first announced in 2021 as part of the National Recovery and Resilience Plan.

How much does a Bess plant cost?

CAPEX of the BESS plant is of the greatest importance regarding the commercial assessment of the investment. With BESS system prices being high today (with costs for Lithium-Ion BESS ranging from 550.000 EUR/MW to 650.000 EUR/MW for the future).

How many MW of Bess will be awarded?

In total 1000 MW of BESS will receive the support mechanism and the plan is to be awarded with two more phases culminating December 2023. CAPEX of the BESS plant is of the greatest importance regarding the commercial assessment of the investment.

How much does a Bess system cost?

With BESS system prices being high today (with costs for Lithium-Ion BESS ranging from 550.000 EUR/MW to 650.000 EUR/MW for the future). The augmentation or repower plan strategy to be followed by the investor will greatly influence the commercial assessment both in terms of costs and revenues.
