Where can I find performance and testing protocols for stationary energy storage systems?

The United States has several sources for performance and testing protocols on stationary energy storage systems. This research focuses on the protocols established by National Labs (Sandia National Laboratories and PNNL being two key labs in this area) and the Institute of Electrical and Electronics Engineers (IEEE).

What are some useful reports about energy storage testing?

Below is a non-exhaustive list of valuable reports that the working group has relied on when becoming familiar with storage testing. "Electric energy storage - future storage demand" by International Energy Agency (IEA) Annex ECES 26, 2015, C. Doetsch, B. Droste-Franke, G. Mulder, Y. Scholz, M. Perrin.

What are the applications of energy storage systems?

Peak Shaving: Another important application is peak shaving, where the energy storage system is discharged during an "on-peak" period and charged during an "off-peak" period. Voltage Support: This is also important and is where the power is used to maintain the voltage within specified limits.

What is the energy storage operators' Forum guide?

This report is based on individual project outputs exchanged within the Energy Storage Operators' Forum in the United Kingdom. The Guide is designed as a reference document, with chapters relating to each stage of the project life cycle (e.g., procurement, installation, safety assessment, business case development).

Can a stationary energy storage system adapt to other energy storage systems?

In regions where there is an absence of extensive or relevant protocols for stationary energy storage systems, there may be the ability to adapt or expand on protocols for other energy storage systems that are available.

What are the standards for stationary energy storage systems in India?

The Bureau of Indian standards governs testing protocols for stationary energy storage systems for the country of India. As examples of standards, IS-1651 provides information on lead-acid cells and batteries using tubular positive plates and IS-1652 is for lead-acid cells and batteries with flat positive plates.
