

Flexible transformation plan for solar thermal energy storage and thermal power

Why is flexibility transformation important for thermal power plants?

This has important practical guiding significance for thermal power plants to reduce the transformation cost, improve the operation efficiency, and promote the efficient and orderly development of the flexibility transformation work.

Can thermal storage power plants achieve 100 % renewable power supply?

The paper at hand presents a new approach to achieve 100 % renewable power supply introducing Thermal Storage Power Plants (TSPP) that integrate firm power capacity from biofuels with variable renewable electricity converted to flexible power via integrated thermal energy storage.

How can we enhance the flexibility of renewable-penetrated power systems?

This paper proposes to enhance the flexibility of renewable-penetrated power systems by coordinating energy storage deployment and deep peak regulation of existing thermal generators. First, the growing flexibility requirement in the presence of variable renewable energy is discussed and quantified using proposed indices.

Can thermal generators improve the flexibility of renewable-penetrated power systems?

This paper proposes to enhance the flexibility of renewable-penetrated power systems by coordinating energy storage deployment and deep peak regulation of thermal generators.

What is flexible renewable power generation of TSPP?

Flexible renewable power generation of TSPP is able to cover the highly variable residual load. TSPP use solar- and bioenergy and grid surplus as primary energy sources for dispatchable power generation. Dispatchable renewable electricity is the key for energy transition also in industry, heat and transport.

What is thermal storage power plant (TSPP)?

Thermal Storage Power Plants (TSPP) that integrate solar- and bioenergy are proposed for that purpose. Finally, in the third phase, renewable power supply can be extended to other sectors via power-to-X technologies, reducing fossil fuel consumption for transport, heat and industrial purposes.
