

Hybrid solar storage cost breakdown in Greece 2026

Should Greece invest in energy storage facilities?

Currently there is a growing interest for investments in storage facilities in Greece. Licensed projects mostly consist of Li-ion battery energy storage systems (BESS), either stand-alone or integrated in PVs, as well as PHS facilities .

Should Greece invest in pumped hydropower storage facilities?

The pileup of proposals for wind and solar power plants in Greece bolstered the interest in investments in pumped hydropower storage facilities to balance the output from the two intermittent sources. Government-controlled PPC is dominating the map.

Why is Greece preparing a third battery energy storage tender?

Greece is already preparing its third battery energy storage tender, making it one of the most advanced markets in Europe, but acceleration is also evident in the pumped storage hydropower segment. Wind and solar power plants are being built in such quantities that neither demand nor the grid can keep up.

How will the EU support hybrid projects in Islands?

On top of it all, EnergyPress has learned that the Ministry of the Environment and Energy is preparing EUR 200 million to support hybrid projects in islands. They would encompass electricity production, energy storage and desalination, including pumped storage hydropower technology. The subsidies would be from the Decarbonization Fund for islands.

How long should energy storage be in a Greek power system?

Considering the energy arbitrage and flexibility needs of the Greek power system, a mix of short (~2 MWh/MW) and longer (>6 MWh/MW) duration storages has been identified as optimal. In the short run, storage is primarily needed for balancing services and to a smaller degree for limited energy arbitrage.

What changes have been made to electricity storage in 2022?

In 2022 major interventions took place in the legal framework to establish the activity of electricity storage, with law 4951/2022 introducing the following: Typology of storage -FtM facilities and BtM storage in RES plants and prosumers. Streamlining of licensing procedure. Participation in all electricity markets.
