Why should you invest in a PV-Bess integrated energy system?

With the promotion of renewable energy utilization and the trend of a low-carbon society, the real-life application of photovoltaic (PV) combined with battery energy storage systems (BESS) has thrived recently. Cost-benefit has always been regarded as one of the vital factors for motivating PV-BESS integrated energy systems investment.

Why is cost-benefit important in PV-Bess integrated energy systems?

Cost-benefit has always been regarded as one of the vital factors for motivating PV-BESS integrated energy systems investment. Therefore, given the integrity of the project lifetime, an optimization model for evaluating sizing, operation simulation, and cost-benefit into the PV-BESS integrated energy systems is proposed.

Will targeted grid upgrades benefit solar in Mexico?

Targeted grid upgrades, if any, for wind, will benefit solar as well because solar resources exist in all areas of the country. Solar potential in Mexico is six times larger than wind, and the technology complements wind generation very well. The solar industry has generated more than 70,000 jobs<sup>1</sup> in Mexico.

How much solar power does Mexico need in 2024?

To meet the 35% clean energy target in 2024, Mexico needs at least 128.83 TWh or 42.56 TWh of additional clean energy generation. National solar PV capacity potential is estimated at 24,918 GW.<sup>1</sup> This potential capacity could generate 50,196 TWh/yr or 137 times the 365 TWh estimated demand for Mexico in 2024.

What is a PV + Bess hybrid system?

The PV + BESS hybrid system implementation can fully explore and combine the technical and economic advantages from both, and realize the energy arbitrage and peak-shaving power generation while alleviating the volatility of PV generation on the main grid, thus improving the overall economic benefits of the project.

What is a PV-Bess hybrid system?

The brief architecture of PV-BESS hybrid systems is introduced and the power modeling of PV panels and BESS is formulated to reveal the principle of PV and BESS realizing the energy arbitrage by selling excess electricity to the utility grid during the operation process.
