Can battery manufacturers securing supply of essential battery raw materials by 2030?

Based on current market observations, battery manufacturers can expect challenges securing supply of several essential battery raw materials by 2030, McKinsey's report finds. Battery makers use more than 80% of all lithium that is mined today, and that share could grow to 95% by 2030.

Will manganese demand outpace the demand for battery-grade materials?

Meanwhile, the supply of manganese is projected to grow moderately through 2030, but an increasing demand for battery-grade material is likely to outpace supply, requiring the development of new refineries.

Can high-purity manganese be used for battery use?

Despite being plentiful, the refinement of high-purity manganese into manganese sulphate monohydrate (HPMSM) for battery usage is complex and demands stringent control to eliminate impurities. McKinsey's production growth projections remain conservative with only a small fraction of demand anticipated to be met by 2030.
