What is compressed air energy storage (CAES)?

As a new type of energy storage, compressed air energy storage (CAES) is considered to be the most promising large-scale energy storage system [12, 13], which can effectively overcome the problems of small energy storage scale, complex site selection, and high construction costs.

What are the advantages of compressed air energy storage?

Compressed air energy storage has the following advantages: site selection is relatively flexible, and energy storage systems can be built according to existing wind power or photovoltaic power plant sites. The storage efficiency is high, and its conversion efficiency can usually reach 70%-90%.

How to support underground caverns for compressed air energy storage (CAES)?

A reasonable support could ensure the stability and tightness of underground caverns for compressed air energy storage (CAES). In this study, ultra-high performance concrete (UHPC) and high-temperature resistant polyethylene were used for structural support and tightness of caverns excavated in hard rock.

How much energy does an air engine use?

Thus: a system where we heat the air for an air engine (heat added to keep it isothermal) - 1.5kWh is the available energy. A 33% efficient air engine gets us 500Whr. This is not bad, worth pursuing. Essentially: 1/2kWhr of storage for a \$300 tank cost. This paper shows 70% efficient engines.

How much energy does a 50 L tank of air release?

According to the calculator, a 50 l tank of air at 3000 psi will release about 0.5kWh via adiabatic expansion, and 2.5x this with isothermal expansion. Thus: a system where we heat the air for an air engine (heat added to keep it isothermal) - 1.5kWh is the available energy. A 33% efficient air engine gets us 500Whr.

How much energy is stored under isothermal expansion?

One k type cylinder, 50 l volume, gives 5300 kJ or 1.4kWh of stored energy under isothermal expansion. Thus, Wikipedia checks with online calculator. Tech used: diaphragm and bump valve without spring. Diaphragm acts as spring. This with 50 kWhr/cubic meter.
