

Off grid solar storage cost vs benefit calculation in Czech

What is a solar energy calculator?

The calculator helps evaluate the financial benefit of an investment in solar panels and/or battery storage. The calculator takes your annual electricity use (kWh) and the annual output of your solar system and works out how much of your solar generated electricity will be used in the home or exported to the grid.

Does the arbitrage battery strategy work if there are no solar panels?

The arbitrage battery strategy works even when there are no solar pv panels attached but you will need to have a smart meter to allow access to half hour electricity prices and SEG payments and the battery software must permit energy arbitrage.

Is there a potential for solar installations in Europe?

There is a huge potential for solar installations, with ideal climate conditions and substantial funding coming from the EU. The situation is similar in other areas of Central and Eastern Europe, where Wattstor has already completed a number of successful renewable energy installations - such as Poland, Croatia and Slovakia.

How much solar energy is used in a home?

As a guide, typically around 40% of the solar electricity generated by solar panels is used in the home and 60% exported to the grid. So if your total solar generation was circa 4,000 kWh per year then about 1,600 kWh of this would have been used in the home and 2,400 kWh would have been exported.

How long do solar panels last?

Warranty periods currently on battery storage vary from 2 - 10 years and a working assumption is that 2% battery capacity is lost per year of use. For solar panels, warranty periods vary from 10 - 25 years and again output may degrade over time.
