

Power reserve time of seamaster 8500 movement

Is the Omega 8500 hand windable?

Hand-Windable? The Omega caliber 8500 is an in-house automatic movement. The rotor winds in both directions to reduce winding time. Power reserve of 60 hours. Swiss made. The pictures below are from an Omega Seamaster Aqua Terra Golf Edition and a newer style Planet Ocean XL.

What is the Omega 8500 movement?

Omega calls the 8500 an in-house movement, however, many enthusiasts are hesitant in giving this designation to the movement since the movements are apparently made by ETA with Omega (Co-Axial) designs and technology.

How to wind Omega caliber 8500?

To wind the Omega caliber 8500, you need to rotate the crown 60 manual rotations. The bridges of the movement give an impression of quality. They are solidly made and well-finished. It is decorated with "Cotes de Geneve en Arabesque" which enhances the quality impression of this movement and also makes it more interesting to look at.

Is Omega caliber 8500 a good watch?

The caliber 8500 series was released in 2007 and has established itself well in Omega's range of watches. Interesting to point out is that Omega caliber 8500s manufactured after 2011 come equipped with the silicon Si14 balance springs. This silicone provides more stability to the movement.

What caliber is used in the Seamaster collection?

The Calibre 8500 from Omega is today one of the most used calibers, as it is used in the Seamaster collection. To fit the Seamaster collection, the size of the movement was increased by 13% compared to the previous generation which was the caliber 2500 series.

What is a Omega 8500 rotor?

The Omega in-house caliber 8500 is a movement from the manufacturer which is equipped with Co-Axial Escapement which improves precision, stability, and durability. The caliber 8500 features a bidirectional rotor, which means it is automatic. Having a bidirectional rotor means a reduced winding time.
