Are solar batteries a smart upgrade for Australian homes?

As energy costs rise and feed-in tariffs fall, solar batteries are becoming a smart upgrade for Australian homes. This definitive 2025 guide will help you understand solar battery storage--how it works, what it costs, how much it saves, and which options are best for you.

How much do solar batteries cost in Australia?

As of May 2025, the average price of solar batteries in Australia ranges from \$900 to \$2,000 per kilowatt-hour (kWh) of storage. A 10kWh system typically costs a little over \$10,000, while a larger 16kWh system may approach \$16,000, depending on the brand, performance, and installation factors. Here's a breakdown of average prices.

Are solar battery prices going down in 2025?

Solar battery prices have come down a lot in recent years, and in 2025, you can save even more thanks to government Federal & State rebates and incentives. However, the total cost can still vary depending on your setup. If you're adding a battery to an existing solar system, it might be cheaper than if you need to install a new inverter as well.

Are solar batteries a good investment in Australia?

The growing trend of solar battery adoption in Australia, with over 250,000 units installed by 2024, underscores the positive impact on property value and energy independence, as noted by the Australian government. These stories reflect the potential for solar batteries to transform energy usage and promote sustainable living within communities.

Are you eligible for solar battery rebates in 2025?

In 2025, homeowners may be eligible for solar battery rebates as part of a nationwide effort to promote clean energy. These rebates are designed to make home solar batteries more affordable, particularly for systems that utilize advanced technologies like lithium-ion batteries or dc-coupled batteries.

How much does a solar panel system cost in 2025?

On average, a solar panel system in 2025 could range from \$3,000 to \$30,000 depending on the size and quality of the system. Larger systems that generate more kilowatt-hours of electricity will naturally come with a higher price but may also result in greater long-term savings on electricity bills.
