

# Restrictions on the development of the energy storage industry

Should energy storage standards be harmonised?

One emerging issue is the need for harmonized standards and safety regulations for energy storage systems, particularly for newer technologies like flow batteries and hydrogen storage. Inconsistent or outdated regulations can hinder the widespread deployment of these innovative solutions.

Can energy storage provide a large set of Energy Services?

With regard to market design, energy storage is allowed to provide a large set of energy services, according to relatively recent modifications of Californian power market. Currently, energy storage may be used for Daily, weekly, and seasonal arbitrage.

Are energy storage directives inconsistent in regulatory frameworks?

However, the implementation and interpretation of these directives have varied, leading to inconsistencies in regulatory frameworks. Some countries, like Germany and Italy, have introduced specific energy storage market mechanisms, such as capacity auctions and tariff structures, to incentivize investment.

Should energy storage systems be regulated?

Energy storage systems play a major role in this regard. Available options for revised regulation -- Ideally, connecting to the grid should imply a commitment to pay for all of the network costs caused. Let us consider, just as an example, a typical scheme for a private regasification facility.

How can policymakers drive investment in energy storage?

To drive investment in energy storage, policymakers are exploring a range of market-based incentives. Power Purchase Agreements (PPAs) and Contract for Difference (CfD) schemes can provide long-term revenue certainty for energy storage project developers, attracting greater private capital.

Should storage services be regulated?

Hence, markets rules should allow storage services to compete in a nondiscriminatory manner with other services (e.g., utility-scale storage vs. CCGTs). The second kind of regulatory challenge has to do with the regulation of energy networks, because storage services may avoid the use of "regulated" networks.

In December 2020, DOE released the Energy Storage Grand Challenge (ESGC), which is a comprehensive program for accelerating the development, commercialization, and utilization of ...
