

Solar plus storage project financing options in Netherlands 2026

Can you finance a solar energy storage project?

Since the majority of solar projects currently under construction include a storage system, lenders in the project finance markets are willing to finance the construction and cashflows of an energy storage project. However, there are certain additional considerations in structuring a project finance transaction for an energy storage project.

Why do energy storage projects need project financing?

The rapid growth in the energy storage market is similarly driving demand for project financing. The general principles of project finance that apply to the financing of solar and wind projects also apply to energy storage projects.

Why do NedZero and Holland Solar need a SDE++ solution?

NedZero and Holland Solar call on the government to quickly come up with a solution so that sustainable projects can continue. "Continuation of the SDE++ is the basis of the trust that entrepreneurs have in the government to be able to make their investments more sustainable.

Will there be an SDE++ opening round in 2026?

On 21 February 2025, the government announced by letter that there is no longer any budget for an SDE++ opening round in 2026. This is partly due to significantly lower electricity prices, which will increase the cash expenditure of the SDE++.

Are solar and wind projects a good investment?

These projects will have long-term predictable revenue streams. In addition, lenders may be willing to finance merchant cashflows, but with less leverage and subject to detailed market studies and cash sweeps. These trends for solar and wind projects also apply to energy storage projects.

Will a tax credit be available for energy storage projects?

However, with the passage of the Inflation Reduction Act of 2022, tax credits are now available for standalone energy storage systems, and thus lenders may be willing to provide bridge capital that is underwritten based on the receipt of proceeds from an anticipated tax equity investment, similar to renewable energy projects.

The global energy transition requires 387 GW of new storage capacity by 2030, but traditional financing models keep tripping over three core challenges: unpredictable revenue streams, ...
