

Solar storage inverter cost vs benefit calculation in Iran

How much solar energy does Iran have?

In 2019, Iran's renewable energy capacity reached 841 MW, with solar energy accounting for the majority of this capacity. The country has also been investing heavily in solar energy infrastructure, including the construction of large-scale solar power plants and the installation of solar panels on residential and commercial buildings.

Is solar energy a viable option in Iran?

The potential for PV is extremely high in Iran, mainly due to having about 300 clear sky sunny days per year on two-thirds of its land area and an average 2200 kWh solar radiation per square meter (Najafi et al. 2015).

Why should you invest in a PV-BESS integrated energy system?

With the promotion of renewable energy utilization and the trend of a low-carbon society, the real-life application of photovoltaic (PV) combined with battery energy storage systems (BESS) has thrived recently. Cost-benefit has always been regarded as one of the vital factors for motivating PV-BESS integrated energy systems investment.

How does co-locating a solar inverter reduce the cost of deploying solar?

Coupling by co-locating storage and solar can decrease the overall net costs of deploying PV and storage (AC coupling). Further cost reductions are possible via sharing the inverter (DC coupling). This can reduce clipping but can result in non-optimal storage dispatch, especially if the storage capacity is sized close to the size of the inverter.

How much energy does Iran use per capita?

Iran is one of the most energy intensive countries of the world with per capita energy consumption of 35.2 MWh/capita (IEA 2016; Duro 2015; Tofigh and Abedian 2016). Energy use in Iran is inefficient mainly due to huge energy subsidies by the government.

Why is cost-benefit important in PV-BESS integrated energy systems?

Cost-benefit has always been regarded as one of the vital factors for motivating PV-BESS integrated energy systems investment. Therefore, given the integrity of the project lifetime, an optimization model for evaluating sizing, operation simulation, and cost-benefit into the PV-BESS integrated energy systems is proposed.
