Can a zinc-ion battery be used in stationary energy storage?

The main application market that Salient is targeting is stationary energy storage. "Residential yes, but ultimately we want to be in the shipping containers." With the main advantage being safety, Brown sees the zinc-ion battery as a viable alternative for batteries that need to be placed indoors, such as in apartment buildings.

Can zinc ion batteries be used in apartment buildings?

With the main advantage being safety, Brown sees the zinc-ion battery as a viable alternative for batteries that need to be placed indoors, such as in apartment buildings. "A city is not place to put energy storage outdoors, and with California mandating that apartments must have energy storage, zinc-ion is a safe solution."

Are aqueous zinc-based batteries suitable for future energy storage systems?

Aqueous zinc-based batteries (AZBs) with the advantages of high safety, low cost, and satisfactory energy density are regarded as one of the most promising candidates for future energy storage systems. Rampant dendrite growth and severe side reactions that occur at the Zn anode hinder its further development.
