What is the wire cut process?

The wire cut process utilizes electrically charged wires. An electrically charged wire functions as a tool for material erosion. The wire traverses through specific programmed paths that eliminate precise material sections. Let's break the process into steps: Step 1. Setup of the Workpiece and Electrode Wire Wire EDM Workpiece Placement

How does wire-cut EDM work?

The process produces small chips and precise cut lines by melting or vaporizing the material rather than cutting it. As a result, it can conveniently machine parts unsuitable for conventional machining techniques. However, the parts must be electrically conductive. How Does Wire EDM Work? The wire-cut EDM process has a simple mechanism.

Which steel is best for wire EDM cutting?

Additionally, Wire EDM preserves stainless steel's corrosion resistance by avoiding heat-affected zones. So, overall, it is ideal for wire EDM cutting. Wire cutting steel works well with many steel grades: 304 stainless steel is ideal for precision engineering tasks, where protecting parts from corrosion matters.

What is wire EDM cutting?

Wire EDM cutting produces parts with tight tolerances and is the go-to machining process for aerospace part manufacturers. This process, alongside the waterjet cutting process, is especially used for parts that cannot withstand the high temperature and stress associated with traditional cutting tools.

Can wire EDM cut stainless steel?

Besides, it produces shapes that conventional tools cannot handle. Wire EDM is compatible with cutting multiple stainless steel grades, including 304, 316, and 440C and their derivatives. Specifically, it operates effectively on 17-4 PH and 2205 duplex stainless steel materials in addition to conventional alloys.

What is wire electrical discharge machining?

Wire electrical discharge machining is a non-contact subtractive manufacturing process that uses an electrically charged thin wire with a dielectric fluid to cut a metal part into different shapes. The process produces small chips and precise cut lines by melting or vaporizing the material rather than cutting it.
