

# Xixian new energy storage subsidy policy

Are energy storage subsidy policies uncertain?

Subsidy policies for energy storage technologies are adjusted according to changes in market competition, technological progress, and other factors; thus, energy storage subsidy policies are uncertain. In this section, the investment decision of energy storage technology with different investment strategies under an uncertain policy is studied.

What are China's energy storage incentive policies?

China's energy storage incentive policies are imperfect, and there are problems such as insufficient local policy implementation and lack of long-term mechanisms. Since the frequency and magnitude of future policy adjustments are not specified, it is impossible for energy storage technology investors to make appropriate investment decisions.

Will China's new energy storage installations reach 112 GWh in 2025?

Based on current energy storage market and the Notice, InfoLink expects China's new energy storage installations to reach 112 GWh in 2025, up 9% YoY. But if local policies or incentives (e.g., capacity pricing or compensation for grid services) fall short, the industry may face some challenges in 2026-2027.

How will China's energy storage policy change in 2025?

The current Notice sets the framework for energy storage policy, while detailed rules will be made by each Chinese province based on local conditions by the end of 2025. This transition period may cause short-term market fluctuations, so industry players should stay flexible and prepared.

Do cities need a subsidy for energy storage?

Most cities do not have high profitability for energy storage to participate in peaking auxiliary services and urgently require policy subsidies. Specifically, under certain policy conditions, a subsidy of at least 0.0246 USD/kWh is necessary to motivate investors to invest effectively.

What is China's new energy policy?

Hereafter referred to as the Notice, or as Document 136, this policy not only signals a shift in China's new energy generation model--from reliance on fixed tariffs, subsidies, and guaranteed procurement toward market-based competition--but also presents both new opportunities and significant challenges for the country's energy storage market.

Driven by the national strategic goals of carbon peaking and carbon neutrality, energy storage, as an important technology and basic equipment supporting the new power ...

Ever wondered how countries are racing to power up their energy storage game? Spoiler: foreign energy storage subsidies are the secret sauce. This article isn't just for policy ...
